### Time of Issuance and Scope of Coming Crop Reports

The United States Department of Agriculture will publish the following crop reports in the month of August.

August 8, 1936, Saturday, 11 a. m. (E. T.), reports as of August 1 on condition, probable total ginnings, and indicated probable yield per acre of cotton.

August 10, 1936, Monday, 3 p. m. (E. T.), estimates of yield per acre and production of winter wheat and rye; acreage of buckwheat, grain sorghums, and broomcorn; reports as of August 1 on condition and indicated production of corn, spring wheat, oats, barley, buckwheat, flaxseed, rice, grain sorghums, tame hay, wild hay, all clover and timothy hay, alfalfa hay, dry edible beans, apples, peaches, pears, grapes, potatoes, sweet-potatoes, tobacco, sugar beets, broomcorn, and hops; condition of pasture, soybeans, cowpeas, peanuts, and citrus fruits; and for certain States reports on production of cherries and condition and indicated production of miscellaneous fruits and nuts.

### General Crop Report as of June 1, 1936

Unusually sharp changes in crop prospects occurred in the various States during May according to the June 1 estimates of the Crop Reporting Board. In the southern part of the Great Plains area, from central Nebraska and northeastern Colorado to the Rio Grande, prospects for late crops and ranges were greatly improved by the heavy general rains, but in much of this area winter wheat was too far advanced to be benefited. Good rains also fell during May in Washington and Oregon west of the Cascades. In nearly all other parts of the country the hot dry weather of May gave most crops a poor start.

Crop prospects on June 1 were markedly better than on that date in 1934. With the exception of all crops in 1934 and the hay crop in 1926, spring wheat, oats, barley, rye, hay, and pastures all show the lowest June 1 condition on record. Winter wheat production is forecast at 482,000,000 bushels which would be above production in each of the last 4 years but far below the previous average.

In the Piedmont section of the Carolinas and Georgia much of the cotton shows a ragged stand and much of the planted seed had not sprouted by June 1 because of the drought. In the same States there has also been a heavy loss of tobacco plants after setting and as it is now rather late to reset in most of this area this will tend to decrease production of flue-cured tobacco. In the whole area from central Alabama and central Kentucky eastward, the drought has interfered with prepara-

tion of the ground and the planting of late crops, including soybeans, cowpeas, and sweetpotatoes. Various truck crops, strawberries, and home gardens have also suffered rather seriously.

During the first 9 days of June, good rains and local showers ended the drought in some areas and provided partial or temporary relief to a large part of the area where conditions on June 1 were most distressing but adequate moisture is still lacking in a large portion of the area east of the Mississippi River and also in some northern portions of the Great Plains. If dry weather continues in these areas there is danger of extensive crop failure. On the other hand, with the exception of the large acreage of winter wheat abandoned and some fields of cotton and tobacco where no stand was secured, there has been little actual loss of crops as yet. Timely rains during the remainder of the season could still result in about the usual production of most field crops except wheat. The condition of crops and pastures and the supply of soil moisture are not greatly different from what they were at this season in 1932 and equally favorable weather could still cause nearly equally heavy production.

(Continued on p. 179)

<sup>1</sup> Condition reported as of June 1 or at time of harvest.<sup>2</sup> Includes all potatoes for harvest before Sept. 1 in States mentioned.

## General Crop Report—Continued

The production of several important fruits will be rather light. The severity of the winter caused further loss of apple and peach trees in the North Central States and late frosts nipped fruit buds over a wide area, but particularly in Oklahoma and in the Ohio River and Central Mississippi Valley areas. The forecast of peach production is 40,615,000 bushels which would be slightly smaller than any peach crop since 1921. The number of apple trees in bearing has been declining and the condition is the lowest for June since 1921, so one of the smallest apple crops of recent years is likely. The low condition of California grapes also indicates that a light crop is probable and the dried prune crop is expected to be only about 80 percent of average. The production of plums, cherries, and apricots should be about equal to that usually secured. Early reports on oranges and grapefruit for the picking season beginning next fall show nearly average condition and an increased number of trees in bearing. This suggests a further increase in citrus fruit production, in line with the upward trend during recent years.

The condition of vegetable crops on June 1 was generally much lower than average. Except in the Pacific Coast States, drought conditions during May curtailed yields and prospective yields of green vegetables which are normally marketed during May and June. Lack of rain along the southeastern seaboard will result in low potato yields in the important commercial areas from Maryland southward.

## Estimated Crop Conditions June 1, 1936, with Comparisons—Continued

## Pounds of Milk Produced per Milk Cow in Herds Kept by Crop Correspondents, on June 1, 1934-36, and 9-year June 1 Average, 1925-33

[State averages calculated by dividing the reported total daily milk production of about 20,000 herds on the 1st of each June by the number of milk cows in milk or dry in these herds. To reduce to quarts divide by 2.15]

<sup>1</sup> Includes 4-year (1928-31) average for fall crop in Texas.

<sup>2</sup> Includes some quantities not harvested on account of market conditions.

<sup>3</sup> Short-time average.

<sup>4</sup> No longer of commercial importance.

<sup>5</sup> Includes acreage and production utilized by kraut packers.

<sup>6</sup> Includes undetermined amounts used for canning in some States.

<sup>7</sup> Fall crop in California supplies earliest new-crop movement, starting in fall preceding the year shown.

<sup>8</sup> Includes 4-year average for Virginia.

<sup>9</sup> Includes a 4-year (1928-31) average for Tennessee, which has not had a commercial crop of any importance since 1931.

<sup>10</sup> Revised.

<sup>11</sup> Includes undetermined amounts used for cold pack, manufacture, etc.

<sup>12</sup> Yield per acre of strawberries in crates containing 24 quarts (36 pounds).

<sup>13</sup> Total acreage in 1935 for Mississippi, 10,600 acres. Production from 850 acres was taken by canning firms and this acreage was deducted from total.

**Citrus.**—The June 1 reports on the citrus crops from the 1936 bloom show the condition of oranges somewhat below the 5-year (1928-32) average in California and Florida, but for Texas it is considerably higher than for the last 2 years. Condition of grapefruit in Florida and Texas is considerably above the low condition of June 1, 1935. The California crop is about average, and Arizona condition is only fair. Condition of lemons and limes is about average.

## Revised Estimates of the Cotton Crop of 1935, by States

The Crop Reporting Board, in revising statistics of acreage, yield per acre, and production of the 1935 cotton crop, estimates the area in cultivation in the United States on July 1 to have been 27,888,000 acres; the area harvested 27,335,000 acres; and the yield of lint cotton to have been 186.3 pounds per acre. The report of the Bureau of the Census, published on May 19, placed final ginnings for the 1935 crop at 10,638,391 equivalent 500-pound bales.

The 1934 acreage has been revised slightly in light of the census enumeration, the United States revised planted and harvested acreage being placed at 27,860,000 and 26,866,000 respectively, and the revised estimate of harvested yield is 171.6 pounds per acre. The production remains at 9,636,000 equivalent 500-pound bales.

The acreage harvested in 1935 was approximately 2 percent larger than the harvested acreage in 1934, 9 percent smaller than the harvested acres in 1933, and 32.6 percent smaller than the average harvested acreage for the period 1928-32.

Production in 1935 of 10,638,000 bales is about 1,002,000 bales or 10 percent above the 1934 crop, 2,409,000 bales or 18 percent below the 1933 crop, and 4,028,000 bales or 28 percent below average production in the 5-year period 1928-32.

The revised estimates of planted and harvested acreage for the United States vary less than one-tenth of 1 percent from the preliminary estimates made last December. The acreage estimates are in substantial agreement with the acreages indicated by statistics developed from the Agricultural Adjustment Administration's program. The yield per acre and total production as estimated for 1935 are about nine-tenths of 1 percent below the December estimate.

Percentage comparisons of forecasts of cotton production made by the Crop Reporting Board during 1935 season with final production are as follows: August 1, 10.9 percent above final production, September 1, 8 percent above, October 1, 7.8 percent above, November 1, 4.7 percent above, and December 1, nine-tenths of 1 percent above final production. Conditions less favorable than usual after the dates to which the reports relate, together with the lateness of crop in States west of the Mississippi River, resulted in successive reductions as the season progressed. The forecasts are necessarily based upon the assumption that conditions after each report will be about average.

The Crop Reporting Board of the United States Department of Agriculture, from the reports and data furnished by crop correspondents, field statisticians, and cooperating State agencies, and from Census-reported ginnings, makes the following revised estimates of the cotton crop of 1935.

| State                                               | Area in cultivation<br>July 1 |                        | Area<br>picked         |                        | Yield of lint<br>cotton<br>picked per<br>acre |            | Production <sup>1</sup><br>(500-lb. gross<br>weight<br>bales) |                        | Ginnings,<br>1935<br>crop, as<br>reported<br>by census<br>May 19,<br>1936 |

<sup>1</sup> Bales rounded to thousands, allowances made for interstate movement of seed cotton for ginning and added for United States total.

<sup>2</sup> Including Pima long staple, 39,000 acres, yield 229 pounds per acre, production 18,000 bales.

<sup>3</sup> Not included in California figures, nor in United States total.

<sup>4</sup> Ginnings 71,388 running bales, as enumerated by California Crop Reporting Service.

## Cotton: Reduction from Full Yield per Acre from Stated Causes 1933, 1934, and 1935

Total reduction from a full yield per acre of cotton during the season of 1935 from various causes is reported to have been 36.8 percent of a normal or full yield, based upon an inquiry to cotton reporters on this subject. In 1934 the reported reduction was 42.6 percent; in 1933, 28.6 percent; in 1932, 42.7 percent and in 1931, 27.8 percent.

Loss from deficient moisture, or drought, was reported at 9.2 percent, compared with 20.7 percent in 1934, 6.8 percent in 1933, and 8 percent in 1932. Damage attributed to excessive moisture was 3.7 percent, compared with 1.9 percent in 1934, 2.6 percent in 1933, and 3.9 percent in 1932.

"Other climatic" influences, including floods, frost, heat, and hot winds, were somewhat more destructive than usual.

[Zero indicates no damage or less than 1 percent]

Declines in prices of wheat, hogs, beef cattle, and dairy products were largely responsible for the 2-point reduction in the index of prices received by farmers from 105 percent of pre-war on April 15 to 103 percent on May 15. Changes in the index numbers by groups of commodities from mid-April to mid-May were as follows: Fruit, up 14 points; chickens and eggs, up 4; cotton and cottonseed, unchanged; grain, down 1; truck crops, down 2; meat animals, down 7; and dairy products, down 8.

At 103 on May 15 the index of prices received by farmers was 5 points lower than the index a year earlier. For the 5 months from January 15 to May 15 inclusive, prices received by farmers averaged 3 points lower than in the corresponding period a year earlier.

Employment on Farms of Crop Reporters, June 1, 1936, with Comparisons

|--------------------------|--------|
| May 1936                 | 551    |
| May 1935                 | 1,083  |
| 11 months ended May 1936 | 14,177 |
| 11 months ended May 1935 | 17,887 |

### Revised Totals (April 1936)

|                            | Cattle    | Calves    | Sheep and lambs | Goats     | Swine      |
|----------------------------|-----------|-----------|-----------------|-----------|------------|
| April 1936                 | 812,290   | 524,671   | 1,266,791       | Unchanged | 2,558,733  |
| 10 months ended April 1936 | 8,659,548 | 4,763,573 | 14,795,130      | ---       | 23,187,453 |

### Supplementary Meat Inspection Report, April 1936

Inspection of lard at all establishments, 81,225,803 inspection pounds; compound and other substitutes, 41,581,379 inspection pounds; sausage, 64,601,797 inspection pounds.

Corresponding inspections for April 1935: Lard, 63,140,124 inspection pounds; compound and other substitutes, 33,244,178 inspection pounds; sausage, 57,448,217 inspection pounds.

(These totals of inspection pounds do not represent actual production, as the same product may have been inspected and recorded more than once in the process of manufacture.)

### Revision of March 1936 Report

Lard should read 82,512,814 inspection pounds; and sausage should read 60,985,353 inspection pounds.

<sup>1</sup> The prices at country points apply to milk delivered direct by farmers in their own cans to local milk-shipping stations and nearby city milk plants. "Basic" prices are used for cities where a surplus plan or pooling plan is in effect and where net prices are not yet determined. The price per 100 pounds may be reduced to cents per quart by dividing by 46.53.

## Retail Prices of Special Milk, Cream, and Buttermilk

June 1936

| City                     | Special milk, per quart | Certified milk, per quart | Light cream (18-25 percent B.F.) per half pint | Cultured buttermilk, per quart |

| June 1935.....           | 14.32                   | 18.00                     | 13.81                                          | 9.88                           |

Evaporated milk markets were full steady during May. Production in April showed a slightly heavier-than-usual seasonal increase, but stocks in manufacturers' hands continued relatively light under an active movement. Wholesale selling prices of better-known brands remain unchanged and well sustained.

Total estimated production of evaporated case goods of 181,552,000 pounds in April was an increase of 1.2 percent over production in April 1935, and represents the largest April production of record. For the calendar year to May 1, total estimated production of this class of goods amounting to 556,779,000 pounds was substantially the same as during the corresponding period of 1935.

The casein markets in May were slightly unsettled. Demand was moderately active with stocks light but production was increasing. The tone in late May was improved slightly by the advance in cheese prices in Wisconsin which may cause some diversion of milk supplies from casein plants to cheese factories. Carlot prices f. o. b. Chicago were  $\frac{1}{2}$  cent lower at 14 to 14 $\frac{1}{2}$  cents for 20 to 30 mesh; 14 $\frac{1}{2}$  to 14 $\frac{3}{4}$  cents for 60 to 70 mesh, and 14 $\frac{3}{4}$  to 15 $\frac{1}{2}$  cents on 80 to 100 mesh. Prices in the East were mostly unchanged, with quotations on 20 to 30 mesh ranging from 14 $\frac{1}{2}$  to 15 cents; 60 to 70 mesh, 15 to 15 $\frac{1}{2}$  cents, and 80 to 100 mesh, 16 to 16 $\frac{1}{2}$  cents. Fresh casein was offered in New York at 9 to 9 $\frac{1}{4}$  cents per pound c. i. f., and Argentine casein at 9 cents.

<sup>1</sup> Preliminary.

Ranges.—Feed on western ranges is fair to good, being improved by late May and early June rains. Following rather limited rain during April and May, except in the southwest, ranges have not overcome the effect of the last 2 dry years.

## Imports of Forage Plant Seeds

<sup>1</sup> The differences are stated in terms of points or hundredths of a cent per pound. By "On" is meant that the stated number of points is to be added to the price of No. 5 and by "Off" is meant that the stated number of points is to be subtracted from the price of No. 5.

<sup>2</sup> These grades are not tenderable on future contracts made subject to sec. 5 of the United States Cotton Futures Act, as amended, on the futures exchanges at New York, New Orleans, and Chicago.

<sup>3</sup> Total sales. Sales from Aug. 1 to June 6, 1936, amounted to 5,013,349 bales, compared with 3,034,090 bales during the corresponding period in 1935 and 4,905,238 bales in 1934.

# Cold-Storage Holdings

Report of June 1, 1936

Cold-storage holdings of apples, expressed in terms of barrels, exceeded holdings of a year ago by 308,000 and the 5-year average by 149,000.

Creamery butter stocks increased during May by 16,078,000 pounds and were 12,021,000 pounds less than on June 1 last year and 10,871 000 pounds less than the 5-year average.

Stocks of American cheese were increased by 1,201,000 pounds. Holdings were 8,637,000 pounds above holdings a year ago and 9,966,000 pounds greater than the 5-year average.

<sup>1</sup> 3 boxes or 3 bushel baskets are considered the equivalent of 1 barrel.

<sup>2</sup> Frozen eggs are converted on the basis of 35 pounds to a case.

<sup>3</sup> Figures on miscellaneous poultry are no longer comparable in that ducks were included in these figures previous to July 1, 1932.

Total stocks of all varieties of cheese were in excess of those of a year ago by 14,037,000 pounds and the 5-year average by 12,989,000 pounds.

The into-storage movement of shell eggs during May was 2,642,000 cases. Stocks were below those of the same date last year by 685,000 cases and the 5-year average by 1,422,000 cases.

Stocks of frozen egg meats increased during the month by 24,799,000 pounds. Holdings exceeded those of a year ago by 9,291,000 pounds, and the 5-year average by 864,000 pounds.

The total case equivalent of both shell and frozen eggs was 419,000 cases less than last year and 1,397,000 cases less than the 5-year average.

## Cold-Storage Holdings June 1936, by Sections

# The Price Situation

Summary as of June 15, 1936

**Farm prices.**—The general level of farm prices, which in May was at the lowest point since July 1935, appears to have advanced a little during the last month. Sharply higher prices for potatoes and hogs and slightly advanced prices for butter, eggs, cotton, and truck crops appear to have more than offset the declines in prices of cattle, wheat, oats, and corn.

The index of prices received by farmers in mid-May was 103 percent of the pre-war average compared with 105 in April and 108 in May 1935. Prices paid by farmers in May probably were about the same as in April, or 121 percent of the pre-war average, compared with 127 a year earlier. Consequently, as a result of the declines in both groups of prices, the ratios of prices received to prices paid, for April and May, remained at the same levels as a year ago, declining in May to 85 from 87 in April.

**Wheat.**—If present wheat prospects suggesting a production of about 680,000,000 bushels materialize, supplies of wheat for the 1936-37 season may be no larger than to provide for the annual domestic consumption and to build up reserve stocks within the United States. This would result in prices for the coming season that would again average above export levels. Assuming an average disappearance of 625,000,000 bushels and a carry-over on July 1, 1936, of 125,000,000 bushels, a carry-over on July 1, 1937, of 180,000,000 bushels is indicated compared with 152,000,000 bushels on July 1, 1935, and 286,000,000 bushels in 1934. Exceptionally favorable growing conditions for spring wheat would be necessary for the crop to be sufficiently large to result in a surplus for export which would hold domestic prices near world levels.

**Corn and other feed crops.**—Although prices of corn at terminal markets have gradually declined from the high level reached the latter part of April, they have, however, retained a part of the March-April advance. In the seasonal adjustment to the new crop basis, oat prices in late May fell to the low for the season, whereas barley prices during the past month have remained fairly steady. For the remainder of June and during July, corn prices may be expected to continue at about present levels. Changes in the prices of oats and barley will be determined largely by crop developments.

**Potatoes.**—Prices of both old and new potatoes rose sharply during the last half of May and first week of June, but lost much of this advance during the second week of June. Normally, prices of new potatoes decline sharply during this period, but this year prices have advanced, largely because of the poor growing conditions prevailing in the second early and intermediate States this season and the shortage that developed in the supply of old stock during the late spring. At the present time the market supply of potatoes is very short, but this situation is expected to be alleviated shortly, or as soon as shipments from the intermediate States begin to move in volume. The prospect is for a gradual decline in prices as the season progresses, with the rate being accelerated if the crop in the late Northern States matures early.

**Poultry and eggs.**—Market prices of eggs were unchanged during most of May, rising slightly toward the end, and in early June. Receipts of eggs continue to exceed those of 1935, but storage stocks are running less than in 1935. Egg prices, now less than a year ago, will probably be above those of 1935 by the end of the summer.

The farm price of chickens declined slightly from April 15 to May 15, but this is a regular seasonal occurrence. Poultry receipts are beginning to increase over those of 1935, and during the last half of 1936 prices may go below those of a year earlier.

**Hogs.**—Hog prices during late May and early June recovered nearly half of the sharp decline which occurred during the preceding 4 weeks. Curtailment of the seasonal expansion in marketings which occurred during the period of declining prices accounted for most of the recovery. Although a seasonal advance in prices probably will occur in the late summer it is unlikely that the rise will be as great as that which took place last summer, since the indications are that the seasonal reduction in slaughter supplies during the next 3 months will be much less than that which occurred a year earlier.

**Cattle.**—Slaughter supplies of cattle probably will continue relatively large during the remainder of the summer, and the proportion of steers included in such supplies is likely to continue larger than the proportion last year. The supply of well-finished cattle, however, may decline somewhat from present levels by late summer. The usual seasonal trend in prices of the lower grades of slaughter cattle is downward in the last half of the year and unless demand conditions improve considerably in the next few months, prices of such cattle are likely to follow

their normal seasonal course during the remainder of 1936. Prices of the better grades of slaughter cattle, on the other hand, usually advance in the last half of the year and with some decrease in supplies of well-finished cattle in prospect, some rise in the prices of such cattle probably will occur after July.

**Lambs.**—Slaughter supplies of lambs probably will increase rapidly in the next few months as new crop lambs from both the native and Western lamb-producing States begin to move in large volume. The market movement of lambs from the native States and from the Northwestern States has been delayed somewhat because of unfavorable weather and feed conditions. As a result of this delayed movement, the increase in marketings after June may be somewhat larger than usual. Prices of new crop lambs normally decline from June to August. Thus far in the new crop season, lamb marketings have been relatively small and lamb prices have been well maintained, but with a larger than usual seasonal increase in marketings in prospect, lamb prices probably will decline materially in the next 2 months.

**Butter.**—Butter prices declined during the first 3 weeks of May, but rose during the last week of May and the first week of June. It seems probable that prices have about reached the seasonal low point for the year, and during the summer will average considerably higher than in 1935. Foreign prices are higher than they were a year ago and the margin between domestic and foreign prices is relatively narrow. Butter production in April was only slightly larger than production a year earlier, and during the pasture season it may not be greatly different than in 1935. The into-storage movement of butter in May was light and cold-storage stocks on June 1 were relatively small.

**Cheese.**—Cheese prices have risen from the low level reached in early May, and in early June were higher than a year earlier. It seems probable that prices during the summer months will average higher than in the same months of the preceding year. Cheese production and stocks are high compared with other years, but the general demand situation has improved. This has been an important factor in the strengthening of cheese prices.

**Wool.**—The supply of wool including production and stocks available in the United States in 1936 will be considerably smaller than in 1935 but it seems probable that domestic consumption also will be smaller than last year. If mill consumption during the remainder of the year does not decline appreciably from the present level, which is somewhat below that of a year earlier, little further weakness in domestic wool prices is probable in the next few months.

**Cotton.**—Prices were comparatively steady during May but showed a moderate tendency to strengthen throughout the month and during the first week of June. Domestic mill activity continues to run at a high level with an improvement in mill positions with respect to production and sales during the last 2 or 3 weeks. Foreign mill activity shows little change from the comparatively high rate maintained during recent months.

Index Numbers of Prices Received and Paid by Farmers

| Year and month | Index numbers of prices received (August 1909-July 1914=100) |                       |        |             |              |                |                   |            | Prices paid by farmers for commodities used (1910-14=100) |            |                                    | Ratio of prices received to prices paid |
|----------------|--------------------------------------------------------------|-----------------------|--------|-------------|--------------|----------------|-------------------|------------|-----------------------------------------------------------|------------|------------------------------------|-----------------------------------------|
|                | Grains                                                       | Cotton and cottonseed | Fruits | Truck crops | Meat animals | Dairy products | Chickens and eggs | All groups | Living                                                    | Production | Living and production <sup>1</sup> |                                         |

<sup>1</sup> These index numbers are based on retail prices paid by farmers for commodities used in living and production reported quarterly for March, June, September, and December. The indexes for other months are straight interpolations between the successive quarterly indexes.

<sup>2</sup> Preliminary.

## Price Movements of Important Agricultural Products

This set of charts shows the price situation of agricultural products at a glance. The charts forming the border display prices which are considered to be fairly typical of the market price movements of the major agricultural products. The upper chart in the center shows the movement of prices of cotton and cottonseed, grain, dairy products, and meat animals. The lower center chart shows the movement of prices of 47 farm products combined and retail prices of commodities farmers buy.
